

CEILING MATRIX

CEILING MATRIX

Inquiry

Request:

A customer came to SmartMetals with the request for two ceiling solutions for a call centre. The purpose was to attach two displays beside one another on a tube set and to the other ceiling mount 4 flat screens in a matrix configuration.

Solution:

SmartMetals tried to use as much as possible standard products for this solution. She has designed a bracket for the ceiling tube where two tiltable screen brackets could be attached to. For the matrix configuration SmartMetals developed a bracket to which the customer could mount 4 tiltable screen brackets.

Concept:

With this solution the call centre is able to monitor the results of the day and they can quickly respond to certain projects to be improved or see which promotions run well.
