

Wall lift

052.7500 Wall lift for touch screens max. 100 kg

Safe and luxurious

The 052.7500 electric wall lift for your touchscreen brings it to the right height for every user at the push of a button. Besides this ergonomic advantage, this screen mount adds a luxurious look, making it not only suitable for the education market, but particularly for business.

In the bottom position, the wall lift is completely hidden behind the screen. When moving a screen upwards, the lift becomes visible, but even then it retains its sophisticated appearance through the use of an e-chain and the finish on the front.

The wall lift is equipped with anti-collision. If the screen touches something during a movement, the movement stops and the lift goes back a little in the opposite direction.

Convenience for the installer

The 052.7500 offers great installation convenience for integrators.

The lift comes with separate mounting arms which are attached to the rear of the touchscreen. The touchscreen is then simply hung with the arms on the wall lift and securely blocked on to it.

Wall lift

Features

Colour: White

Screen position: Landscape, Portrait

Height adjustment: Electrical 660 mm, speed up to 38 mm/s

Range bracket/interface: VESA 400-600 x 200-400
